

1. Network fundamentals
2. Basic requirement to establish a network
3. Twisted pair cable
4. Straight through cable
5. Crossover cable
6. Cabling standards
7. Process of crimping
8. Networking Devices
9. Basics of switch
10. Basics of router
11. Basics of firewall
12. Access points
13. Endpoints
14. Servers
15. 2-Tier Network Topology Architecture
16. 3-Tier Network Topology Architecture
17. Spine-Leaf Topology
18. WAN
19. Small office/Home Office (SOHO)
20. Ethernet Shared Media connection
21. Point to Point connection
22. Copper cabling
23. Fiber Cabling
24. Multimode Fiber Cable
25. Single Mode Fiber Cable
26. Concept of Power over Ethernet (POE)
27. Identifying and troubleshooting Collisions & errors
28. Fixing Mismatch duplex issues
29. Finding Speed of an interface
30. Compare TCP to UDP
31. On-premises and cloud
32. Wireless LAN controller
33. Cisco DNA Center
34. Broadcast domain and collision domain
35. Half duplex
36. Full duplex
37. Tcp vs udp
38. IP addressing
39. Need for private addressing in IPv4
40. Classes of IP address
41. network section
42. Host section
43. Subnetting
44. FLSM
45. VLSM
46. Basic router configuration
47. Cisco discovery protocol

48. Backup and restore of IOS and running configuration
49. Password reset
50. Telnet
51. Telnet sessions
52. SSH
53. Dynamic host configuration protocol (DHCP)
54. Configure and verify DHCP & DNS within a network
55. Dora process
56. Domain name system server (DNS)
57. SNMP network operations
58. SYSLOG facilities & Levels
59. Automatic private IP addressing
60. Static routing using IPv4
61. Starting routing with floating routes
62. Next hop IP method
63. Exit interface method
64. Default route
65. Gateway of last resort
66. Components of routing table
67. Codes of Routing Protocols
68. Prefix
69. Network Mask
70. Administrative distance
71. Hello Packets
72. Metric calculation
73. Finding the forward decision of a router
74. Longest Match
75. AD value
76. Metric routing protocol
77. Open shortest path first
78. Link state routing protocol
79. Link state advertisement
80. Link state database
81. Database descriptor
82. Link state request
83. Link state acknowledgement
84. Status of neighbor relationship
85. Single area
86. ABR and ASBR
87. Neighbor adjacencies
88. Point to Point network in OSPF
89. Ipv6 addressing
90. Prefix of IPv6
91. Extended unique identifier 64
92. Link local address
93. Global Unicast address
94. Unique Local address
95. Anycast IPv6

96. Multicast IPv6
97. IP & various OS
98. Configuring Static Routing using IPv6
99. Wireless Principles
100. Nonoverlapping Wi-Fi Channels
101. Service set Identifier (SSID)
102. Radio Frequency - RF
103. Encryption
104. Fundamentals of Virtualization
105. Virtual Machines
106. Switching
107. L2 vs L3
108. MAC address Aging Timer
109. Learning MAC address
110. MAC Flooding
111. Frame Switching
112. MAC address table (CAM)
113. Switch virtual interface
114. Virtual local area network
115. Native VLAN
116. Default VLAN
117. 802.1Q
118. Trunk Ports
119. Access Ports
120. Cisco Discovery Protocol (CDP)
121. Link Layer Discovery Protocol (LLDP)
122. Spanning tree protocol
123. Root Bridge election process
124. Root port
125. Designated port
126. Primary & secondary Root Bridge
127. Switch port's Roles and its status
128. Benefits of PortFast
129. Providing WLAN access to a client
130. Configuring Access point and WLC
131. Accessing WLC via HTTP & HTTPS
132. Advance WLAN settings
133. Building WLAN
134. WLC Management IP configuration
135. Layer 2 and Layer 3 EtherChannel
136. LACP (Link Aggregation Control Protocol)
137. PAGP (Port Aggregation Protocol)
138. Rapid PVST+
139. Per VLAN Spanning Tree
140. STP and identifying its basic operations
141. Bridge id in STP

142. Spanning tree priority
143. Spanning tree mac address
144. Inter vlan routing
145. Standard access list
146. Extended access list
147. Named the trees list
148. Network address translation
149. Static network address translation
150. Dynamic network address translation
151. Port address translation
152. Need for First HOP Redundancy Protocol
153. HSRP vs VRRP
154. DHCP starvation
155. DHCP spoofing
156. Network time protocol
157. NTP server & client operations
158. Virtual private network
159. Site to site vpn
160. Cisco anyconnect
161. Dmvpn operation
162. IP service level agreement
163. Radius vs TACACS+
164. Quality of service
165. QoS trust boundary
166. Traffic shaping
167. Traffic policing
168. Queuing Method
169. Congestion management
170. TFTP/FTP Server's capabilities
171. DHCP Snooping
172. Dynamic ARP inspection
173. WLAN security WPA, WPA2 and WPA3
174. Authenticating a WLAN client using a WPA2 PSK
175. Impacts of automation in network management
176. Traditional vs controller based Networking
177. SDN Architecture
178. Control plane, data plane and management plane
179. North-bound and South-bound APIs
180. Cisco DNA center enabled device management
181. REST API
182. CURD and HTTP verbs
183. Chef vs Puppet vs Ansible vs Saltstack
184. Interpreting JSON encoded data
